Foreword

I am delighted to introduce the Department for Business, Innovation and Skills (BIS) Evaluation Plan for 2016.

BIS is committed to ensuring that all of its key policies and programmes are subject to robust monitoring and evaluation. The foundation for this vision was set out in the Department's Evaluation Strategy published in December 2014.

Robust monitoring and evaluation are important in their own right, for transparency and accountability. However, the findings from evaluation must also feed back into the design and implementation of current and future policies, so that we can learn from experience, and allow for policy adjustments.

I am pleased that our monitoring and evaluation coverage is very comprehensive and has improved since last year.

This document is the first of what will be an annual update of BIS Evaluation Plans, which reinforce our commitment to implementing the 2014 Evaluation Strategy.

I am grateful for the contributions from across the Department which made the development of this year's plan possible, with particular thanks to the Central Evaluation Team, who coordinated its production.

A handwritten signature in blue ink, reading 'Sam Beckett'.

Sam Beckett

Director General, Economics & Markets

Department for Business, Innovation & Skills

Introduction

The Department for Business, Innovation and Skills (BIS) Evaluation Strategy was published in December 2014 and lays the foundations for the fulfilment of BIS's vision for monitoring and evaluation, by improving the coverage and use of evaluations, strengthening governance, increasing analytical capability, and ensuring independent and transparent quality assurance.¹

BIS is committed to investing in a body of evaluative work that covers our programmes and policies throughout their life cycle and uses evaluation as a tool for improving and assessing their effectiveness. The Department aims to provide an open and transparent view of evaluation coverage of BIS policies and support as many robust impact evaluations as possible.

One of the key commitments in the Evaluation Strategy was for BIS to publish a summary of the evaluation coverage for each policy area on an annual basis. This document is the first of what will be an annual update of BIS's evaluation coverage. This process promotes transparency and accountability and will encourage stakeholders and external researchers to engage with the Department and work towards filling the gaps in our evaluation evidence.

In 2014 the Department's evaluation plans were set out in Annex A of the Evaluation Strategy. This annex focused solely on evaluation coverage and gaps for BIS spend. This year's publication also includes coverage for regulation in Annex B. Annex B sets out the statutory reviews and non-statutory reviews with significant impact on business. These regulatory reviews will then inform the decision-making process about whether the regulation should be amended, renewed, replaced or removed.

¹ Department for Business, Innovation and Skills (2014) Evaluation Strategy. Available at: https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/387507/bis-14-1295-evaluation-strategy-2015-16-accountability-and-learning-at-the-heart-of-bis.pdf

Open and Transparent Evaluation

The proportionate evaluation of BIS policies is key to understanding the real impact of government funding, and embedding the lessons learnt in future policy making. BIS is committed to evaluate policies every 3 to 5 years and to publish annual monitoring and evaluation plans for core BIS areas to ensure comprehensive evaluation coverage of all key policies.

This report shows the results of a systematic review of the quality of the monitoring and evaluation plans and their potential to show causal impact for each policy, to support improving the quality of BIS monitoring and evaluation for key policies. This encourages BIS policy makers and analysts to continue to follow best practice as set out in the Magenta Book, by considering monitoring and evaluation early on in the policy making cycle. This will pave the way for more innovative ways to design, monitor and evaluate policies and allow for better evaluation.

The breadth of evaluation coverage of BIS spend is very comprehensive. All policies have some form of monitoring and evaluation plan in place, or in development. The Department has recently made marked improvements in the depth and quality of this coverage in the evaluation plans for major spend areas. Gaps from last year's plan have been identified and flagged with the Department's senior level Policy Evaluation Board (PEB). The PEB's terms of reference include ensuring that there are no gaps in BIS evaluations of major policy, spending and regulatory initiatives.

Last year's annex identified the Repayable Launch Investment programme (RLI) as an evaluation gap. Progress is now being made in evaluating this policy. An evaluation scoping and process review study has now been commissioned for this programme, with the report due in early 2016.

Moving forward, the Department aims to maintain comprehensive coverage, and encourage high quality evaluation by ensuring future BIS programmes fully scope out options for evaluation, and establish detailed plans at an early stage.

Types of Evaluation

There is a wide range of evaluation methods. The diagram below offers one possible categorisation of evaluation types which are used in BIS. These are not mutually exclusive and all contribute in their own right to better policy making.

- Process evaluations look at the process of implementation and allow for policy adjustments
- Outcome based evaluations provide evidence on how far the intended aims, objectives and/or savings are being achieved
- Impact evaluations provide key evidence on whether the policy worked and whether the initiative was better than doing nothing

- Economic evaluations aim to establish how far the cost of the intervention were justified by the benefits achieved, ideally incorporating both cost-benefit analysis and cost-effectiveness

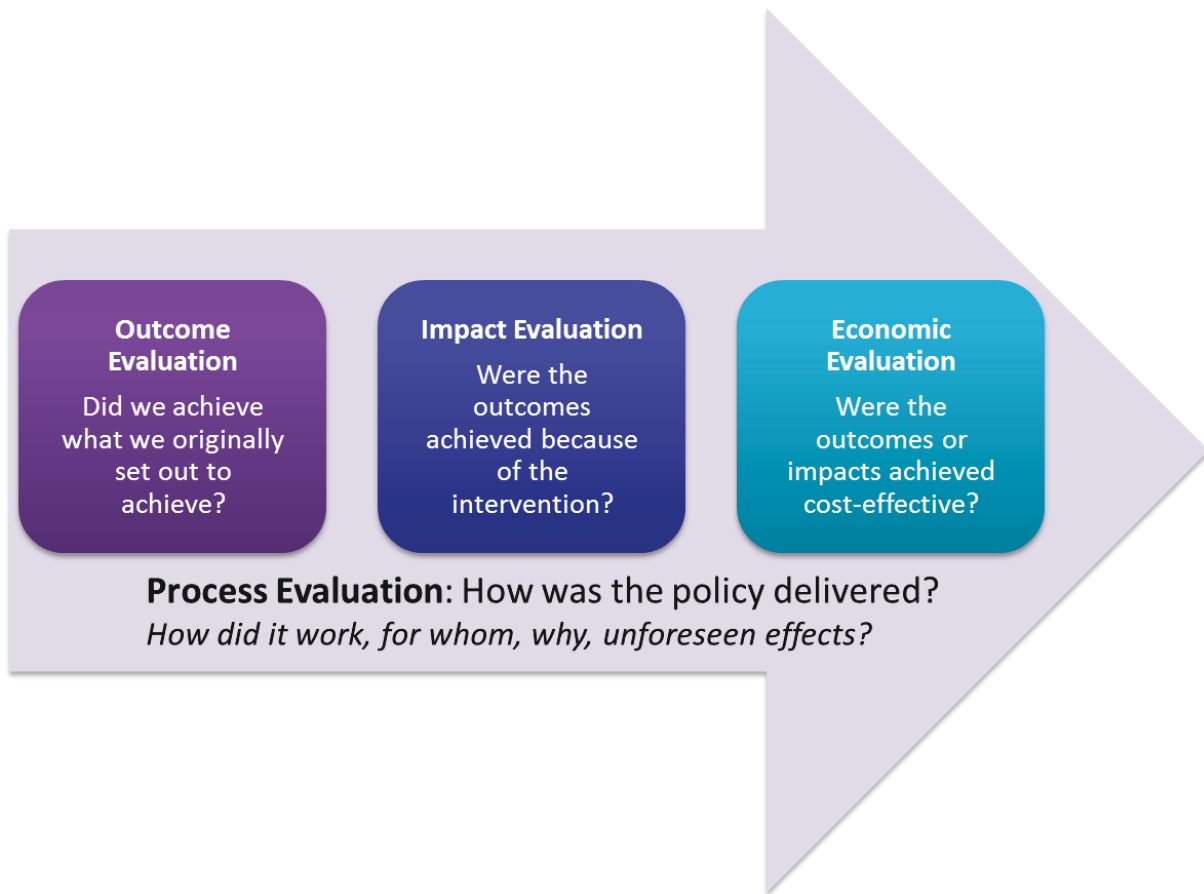

Figure 1: Main evaluation types²

Impact and Economic Evaluation

BIS is particularly interested in implementing impact evaluations wherever possible. Impact evaluations attempt to provide an objective test of what changes have occurred, and the extent to which these can be attributed to the policy. These are normally supported by process evaluations to understand how it worked, for whom, why and whether there are any unintended effects. These impact evaluations will then form a strong base for a thorough economic evaluation.

² Note these are not mutually exclusive. Where possible, BIS will also build upon emerging methodologies such as contribution analysis techniques, theory based evaluations, meta-evaluation techniques, which can take elements of all or some of the evaluation types in the chart.

The Department looks for opportunities to use impact evaluation techniques such as randomised control trials (RCT) or quasi-experimental designs. Where experimental methodologies are not empirically possible, for example, because the sample size is too small or the policy is being implemented universally and it is not possible to have a suitable comparison group, the continued emphasis is on gathering robust actual data on the key outcomes of interest before and after the intervention (i.e. robust monitoring).

It is important to highlight that there are some policy settings where it is not possible to measure a counterfactual as there is no available group to compare which has not received the intervention. For example, the Green Investment Bank does not lend itself to statistical techniques such as propensity score matching or randomised controlled trials to identify impact. This is because, as a financial institution, projects to which the Green Investment Bank lends need to generate a certain level of return to attract co-financiers. It would be difficult to match treated and untreated projects due to the selection effects that are likely to be present. In these cases, BIS aims to secure strong data on outcomes before and after policy implementation, and relies on strong monitoring.

The tables in Annex A provide an overview of evaluation coverage for all BIS areas and scores current evaluations in terms of their capability of showing impact as per the scale described in Section A.2.

Annex A: Open and Transparent Evaluation: Annual Publication of Monitoring and Evaluation Coverage for BIS Spend

A.1 BIS Evaluation Update

This section outlines some of the key information contained in the tables in section A.2 and provides an indication of the progress that has been made within the last 12 months in evaluating key BIS policies.

Enterprise

Since last year's Evaluation Plan, significant improvements have been made in the area of business advice programmes. This is most clearly demonstrated by the Growth Vouchers Programme (GVP) – the largest randomised controlled trial (RCT) of business advice ever conducted (programme started Jan 2014-closed March 2015). An early qualitative and formative evaluation was published in 2015, and the first quantitative report will be published in 2016 with other reports to follow.

The adoption of more robust evaluation methodologies is not limited to GVP. For example, the evaluation of Growth Accelerator (became part of the Business Growth Service in December 2014) also includes an RCT and quasi-experimental approaches, and much greater use is being made of matched tax records to track both business performance and use of other programmes. It is expected that the analytical findings will be published before the end of the current Parliament, although lags in tax data will need to be taken into account. There is also uncertainty around the longevity of impacts resulting from programme; if impacts are identified but yet to dissipate there may be interest in continuing to track outcomes in subsequent years.

These innovations represent a genuine step change in the way government measures the impact of its interventions in this policy area; where historically there has been an over-reliance on measuring impact based on businesses perceptions of the support they have received.

Local Growth

In the local growth policy area, a series of robust evaluations are planned or underway, but their success hinges on robust counterfactual evidence to use a *good* matched before and after comparison group - be it comparator firms or sectors-

bearing in mind it is inherently difficult to assess impact where there is no clear counterfactual in some sectors.

In the past 12 months, progress has been made on the Regional Growth Fund - a full evaluation is now commissioned, comprising four phases spread over six years. Phase 1 early findings using econometric analysis is expected to be published in early 2016.

On Growth Deals and City Deals, a monitoring system is in place which provides data on a quarterly basis. As part of the Growth Deals struck between Government and localities, each place has committed to produce a locally-led evaluation plan.

Sector Analysis

The Department has taken a strategic decision to take a staged approach to impact evaluation in sector analysis. Since last year's plan, the Department has commissioned evaluation scoping studies for a number of policies in this area, including the Aerospace Technology Institute (ATI) and Advanced Propulsion Centre (APC). These scoping studies consider the most effective frameworks for evaluating impact and value for money, and will be complemented by internal process evaluations that provide early lessons for programme delivery. The next phase of activity will comprise commissioning of interim evaluations that focus on intermediate outputs and outcomes, followed by final impact evaluations.

The emerging evaluation framework from scoping studies will result in a mixed method approach that includes the implementation of a number of new and innovative approaches such as theory based and realistic evaluation methods. These methods will be used alongside data linking that uses secondary and administrative data in order to provide an understanding of not just 'what' the impact was, but also 'how' and 'why' it came about, and under what circumstances.

Labour Market Policy

The nature of Labour Market policies are regulatory and apply to the whole population of interest, consequently some types of evaluation can be very difficult to implement in the absence of a valid control group. The Department has strong monitoring systems in place, so comparing outcomes before and after policy interventions is the most feasible approach to evaluation.

Higher Education

In the Higher Education policy area, robust monitoring systems continue to be in place to track participation, student support take-up and educational outcomes at the individual level. Through this the Department will continue to monitor the outcomes of recent higher education reforms. This monitoring approach will be extended to include loans for post graduate taught study which will be introduced in 2016/17.

In the past 12 months, the evidence base has been added to through research into student decision making and participation. To evaluate the impact of the 2012 reforms on students a large scale study, the Student Income and Expenditure Survey (which runs every 3-4 years) is now being finalised, providing comparable data with previous surveys undertaken before the reforms were implemented. In addition research has been conducted to explore whether the 2012 reforms to the student finance offer have influenced students' decision making. The development of further research on this issue is being considered. Research has also been conducted to explore the alternative provider sector and patterns of student inclusion and outcomes. In addition, the National Scholarship Programme (NSP) has continued to be evaluated externally and other widening participation activity is being monitored and evaluated by HEFCE.

Going forward, evaluation of the policy changes planned for 2016/17 (switching maintenance grants for loans and the introduction of postgraduate loans) are currently under consideration and the arrival of matched tax and benefits data on graduate destinations will provide further opportunities for robust analysis.

Vocational Education

Vocational Education has a broad coverage of impact, with some studies establishing a clear baseline and counterfactual using a matched study approach. The opportunity to consider introducing trials to test the effectiveness of policy pilots is considered systematically in the policy development phase. In 2015, examples included testing the effectiveness of online learning for basic skills, and looking at how adults best learn English and Maths through the Behavioural Research Centre for Adult Skills and Knowledge.

The Department continues to develop this approach and is exploring the feasibility of introducing trials to test the impact of community learning with people with mild to moderate mental health conditions. Behavioural insight has been an important element in modelling the potential impact of the introduction of policies (for example the introduction of the levy for apprenticeships) and trials are being set up to help young people navigate their way through technical and professional education.

Further to this, recent work on linking Individualised Learner Record (ILR), HM Revenue and Customs (HMRC), and Department for Work and Pensions (DWP) datasets has provided a new method for measuring value added in FE. The matched administrative data underpins a series of studies that use quasi-experimental approaches, for example, the recently published impact of skills and training interventions on the unemployed.

Innovation

Innovation is a complex area to evaluate with long timescales and complex interactions. Despite these challenges, both Innovation Directorate and its partner

bodies have been making good progress enhancing the evidence base over the last year. On University Enterprise Zones, an evaluation plan was published in March 2015 setting out the methodology for evaluating the programme and data collection is being undertaken from 2016.

Robust plans are also in place to drive further improvements over future years, with early evaluation planning currently being conducted for new finance products to support innovation.

Innovate UK

Innovate UK agreed an evaluation framework with BIS and HMT in late 2013. In implementing this framework, Innovate UK are utilising robust control group methodologies to ensure impact estimates only capture additional impacts, wherever possible.

The implementation of Innovate UK's evaluation framework has progressed well over the last 12 months, with evaluation reports on Smart and Knowledge Transfer Partnerships recently published, and reports covering SBRI and the Biomedical Catalyst due to be published in early 2016. Further to this, work is underway across a range of other activities, covering the majority of Innovate UK's spend and includes a large scale multi-year evaluation of the Catapult network, which will produce its first report in 2016. As Innovate UK moves into a new strategy period in 2016, robust evaluation of all new activities will be implemented in line with best-practice guidance.

Given the inherent time lags in producing robust evaluation evidence for innovation support, Innovate UK has also been working on a wider evidence base including robust econometric analysis of impact by linking their customer database to data on employment, growth, and innovative activity.

Shareholder Executive

Since last year's evaluation plan an interim evaluation of the performance of the Green Investment Bank has been undertaken and is due for publication in early 2016. The quality of the Green Investment Bank evaluation in terms of determining causality is limited by its short running period meaning there is a small number of investments.

Research Base

The Department provides public funding for science and research, primarily through its Partner Organisations (POs) who then allocate funding to individual research projects. Evaluation of investment in the research base is complex, as investment is made across a wide portfolio of basic and applied science and the timescales from investment to impact can be long.

While experimental evaluation methodologies cannot be readily applied across the broad portfolio of research funding, where appropriate, the Higher Education Funding Council (HEFCE) and Research Councils undertake their own evaluations looking at specific projects, investments, or areas of activity. For example, HEFCE published an evaluation of the economic and non-monetised benefits of the Higher Education Innovation Fund (HEIF) in October 2015.

Since last year's evaluation plan BIS has been working with its POs to better understand and measure the impact of research. This includes analysis of a wide range of case studies from the Research Excellence Framework (REF) Impact Studies and from POs which provide evidence on the impact of individual work. Additionally, the Research Councils have published their annual impact reports demonstrating the ongoing impact of their funding.

BIS has also been working with its POs to ensure that all business cases for capital investment include clear monitoring and evaluation plans, and will be working with project owners to ensure that this monitoring and evaluation takes place.

A.2 BIS Evaluation Coverage Tables

Tables Explanation Note

Programme Spend Threshold

To populate the overview of evaluation coverage for all BIS areas, programme spend that exceeds £10 million was prioritised. Only in instances where the programme is considered important, such as a novel pilot, is programme spend less than £10 million included.

Publication Date

BIS is committed to evaluating policies every three to five years. Nevertheless the dates for interim and final findings to be published are indicative at this stage.

Scoring Impact

Impact scale follows the guidance on 'Quality in Impact Evaluation'³ which has been approved by the Cross Government Evaluation Group and published as supplementary guidance to the Magenta Book. The scale is based largely on the Scientific Maryland Scale used by academics and researchers to assess the strength of an evaluation approach. The higher the score potentially the more capable the evaluations are to demonstrate that the outcome observed is due to or caused by the intervention.

- Score 5: Random allocation of treatment and control group or a robust counterfactual using a quasi-experimental approach. Needs a treatment and a comparison group and actual before and after data in both groups. For example: a strong difference-in-difference design, regression discontinuity design or matched treatment and control group.
- Score 4: Quasi-experimental approach where the counterfactual has some weaknesses, but it is as good as can be given the policy design or data availability issues. Needs a treatment and a comparison group and actual before and after data in both groups. For example: a difference-in-difference design, regression discontinuity design or matched treatment and control group.
- Score 3: Predicted (modelled) versus actual, predictions are based on actual baseline data.

³ HMT (2012) Quality in policy impact evaluation. Available at: https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/190984/Magenta_Book_quality_in_policy_impact_evaluation_QPIE_.pdf

- Score 2: Actual (i.e. not self-assessed or self-reported impact⁴) before and after data. (Higher levels on this scale also require actual data not based on self-reported impact.)
- Score 1: No baseline data (or only self-assessed/self-reported impact).

Evaluability of Policy Design

The impact score is used to assess the strength of an evaluation approach to show impact, which is driven by the evaluability of the policy design. A number of features of BIS policies make it more challenging to evaluate and obtain robust measures of impact:

- Complexity – there are many other factors that could influence outcomes apart from the intervention
- Small sample size – statistical techniques are less able to separate out the effect of the intervention from idiosyncratic features of beneficiaries
- Competitive (or non-random) allocation – interventions are provided for beneficiaries that are assessed to be most likely to benefit. However, these beneficiaries may be different in ways which systematically affect their outcomes, which makes it difficult to determine the impact of the policy by comparing the outcomes against those of non-beneficiaries
- Universal coverage – consequently there is no comparison group at all
- Lack of data – in many cases and for a variety of reasons, there is not enough information to robustly evaluate the impact of interventions.

Methodological Issues

The impact scores for forthcoming evaluations are expected impact scores, which may be impeded by a number of issues that may arise. There may exist empirical reasons where the matched comparison group may not be as strong as first expected or weakness of survey methodology which can inhibit the evaluation from achieving the impact score expected.

Peer Review

Please note all impact scores and Benefit Cost Ratios published before January 2014 have not been peer reviewed by the BIS Expert Peer Review Panel. This Panel was launched in January 2014 to review all evaluations that make claims about the impact or value for money of policy.

Benefit Cost Ratio (BCR)

BIS derives Benefit Cost Ratios by calculating the net economic benefit of the intervention (gross benefits-gross costs) divided by the public cost of the intervention in line with the Green Book.

⁴ Self-reported impact studies base their impact results on information derived by asking the population affected by the policy or beneficiaries to work out what they think the impact has been and what they think would have happened without the intervention.

For full details of the BCR calculations, readers should refer to the main evaluation reports.

Improving Learning and Accountability

To help us better understand whether the initiative did what it intended to do in terms of delivery, BIS analysts tend to commission a process evaluation alongside an impact evaluation. This allows the policy delivery to be refined in future rounds, and is particularly useful when evaluating a pilot, or assessing possible unintended consequences.

Enterprise Directorate Evaluations

Policy intervention and summary	Evaluation name/ impact evaluation score expected	Description of monitoring system	Benefit Cost Ratio (if available or by when)	Interim findings	Final findings
Growth Vouchers (Main) Programme Businesses apply for diagnosis of business advice and are randomly allocated to a personal or online diagnostic. They will then select from one of five themes of strategic advice with vouchers worth up to £2,000 of matched funding randomly allocated.	Growth Vouchers Programme (Main Programme) Expected Impact Evaluation score 5: Randomised Control Trial	Back office IT system provides real-time data on applications received, diagnostics completed, vouchers allocated and contract targets. Monitoring dashboard shared weekly with delivery partners and further assessed in monthly programme monitoring meetings	Benefit data collected via a survey after 6, 12, and 24 months of using advice, to provide an estimate in early 2015 (provided impact happens early). Long-term impact is expected at 24 months after the use of business advice.	Formative evaluation published Early qualitative impact assessment published First interim assessment based on quantitative surveys– with rolling programme of surveys until 2017. Expected publication of first report early 2016.	Surveys of treatment and control groups planned for 2 years after support received, will provide initial assessment of impacts. Impact from RCT using matched tax records to be on-going from Autumn 2015 for 5 years. But it may take at least three years for full impacts to become apparent, not least because of lags in the tax data.
Growth Vouchers Programme (Business Schools) Business schools provide business advice to randomly selected businesses with fewer than 20 employees through growth vouchers. The control group will receive only a detailed diagnostic.	Growth Vouchers (Business Schools) Expected Impact Evaluation score 5: Randomised Control Trial	Same as the main programme (please see above) and monitoring is mainly through our back office IT system, and customer feedback.	Too early to be estimated robustly	Delivery of programme commenced between November 2014 and April 2015.	Surveys of treatment and control groups will provide initial assessments of impact. Impact from RCT using matched tax records to be on-going from Autumn 2016. But it may take at least three years for full impacts to become apparent, not least because of lags in the tax data.

Policy intervention and summary	Evaluation name/ impact evaluation score expected	Description of monitoring system	Benefit Cost Ratio (if available or by when)	Interim findings	Final findings

Policy intervention and summary	Evaluation name/ impact evaluation score expected	Description of monitoring system	Benefit Cost Ratio (if available or by when)	Interim findings	Final findings
applicants in Dec 15					
Growth Hubs Growth hubs will join up local, national, public and private sector business support. They may also operate a number of programmes that provide direct support business. A national network of 39 growth hubs will be established by end March 2016	For overall Growth Hub activity an Expected Impact Evaluation score 1: Self-reported impact – No comparison group BIS and the Local Growth What Works Centre are working with local areas to identify areas of activity where more robust approaches can be adopted.	Monitoring data collected via LoGASnet on a 6 monthly basis covering spend and key performance metrics. Local arrangements for monitoring and evaluation are also in place.	Too early to assess. We are still discussing evaluation plans with local areas.	Too early to say – evaluation not up and running yet.	Too early to say – evaluation not up and running yet.
Enterprise Pilots in Prisons The pilot supported offenders interested in self-employment. Participants were provided with three to six months in-custody support to help them develop a business plan, followed by mentoring and access to finance (through the Start Up Loans Company) post-release.	Evaluation of the Enterprise Pilots in Prisons Impact Evaluation score 1: Self-reported impact – No comparison group	The delivery partners collated monitoring data on pilot participants and delivered this to BIS each month.	Not included in the research. This early stage evaluation examined whether the programme had been delivered effectively and whether it was on course to deliver the expected outcomes.	Interim findings identified a number of improvements for delivery which were subsequently implemented.	Evaluation complete. Report published on 1 st October 2015 (link)

Local Growth Directorate Evaluations

Policy intervention and summary	Evaluation name/ impact evaluation score expected	Description of monitoring system	Benefit Cost Ratio (if available or by when)	Interim findings	Final findings
Grants for Business Investments – Large Projects Discretionary scheme that provides capital grants to businesses to support sustainable investment. The predecessor of Regional Growth Fund. Closed to new applications and is the remaining tail of spend for legacy Grants for Business Investment cases.	The Causal Effects of an Industrial Policy Impact Evaluation Score 5: Matched with before and after	Detailed beneficiary data, plus matched administrative data on program participants from: ONS, SAMIS database, the IDBR and ARD.			Scheme most recently evaluated by Criscuolo et al. Published here , January 2012.
Regional Growth Fund Regional business support – a flexible and competitive fund providing grants to support projects with significant potential for economic growth, that create additional, sustainable private sector employment.	Expected Impact Evaluation score 4: Matched with before and after	Back office IT system provides real-time data on applications received, diagnostics completed, vouchers allocated and contract targets. Monitoring dashboard shared weekly with delivery partners and further assessed in monthly programme monitoring meetings.	Basic cost models will be developed towards the latter stages of this 6-year evaluation. By this stage, more of the impacts of the intervention will have materialised, and more robust cost-benefit analysis will be able to be conducted.	Scoping study completed July 2014. The findings were included in the Impact & Economic evaluation Invitation to Tender (ITT). The full evaluation has been commissioned and comprises four phases spread over 6 years. Phase 1 early findings expected early 2016.	Mid-term assessment planned for 2018. Longer-term assessment due to complete mid-2020

Policy intervention and summary	Evaluation name/ impact evaluation score expected	Description of monitoring system	Benefit Cost Ratio (if available or by when)	Interim findings	Final findings
				Phase 2 rolling Beneficiary survey underway, completing in 2017.	
City Deals Devolved funding and responsibilities to core cities to stimulate economic growth. This is a joint Cabinet Office, DCLG & BIS policy.	Cities Deals: Wave 1 and 2 Monitoring in place through online system	Monthly reporting on Deal actions implemented. This is on-going. Quarterly reporting on outputs - Sept 2014 onwards.			Monitoring and reporting was retrospectively agreed with cities in June 2014. 'Targets' were initially local areas' aspirations and each Deal is bespoke, so targets are not like for like.
Growth Deals Growth Deals provide funds and responsibilities to Local Enterprise Partnerships (LEPs) (partnerships between local authorities and businesses) for projects that benefit the local economy. Includes allocations of capital funding from the Local Growth Fund (LGF).	Local Growth Fund policy started in April 2015. Monitoring in place. Quarterly collection of metrics from LEPs provided through online system Evaluation demonstrator projects have been identified, allowing highest quality experimental techniques to be utilised. These are to	Responsibility for monitoring and evaluation will lie with LEPs, with central oversight and coordination. Continuously working with LEPs to define M&E requirements for LGF (e.g. roads, rail, FE colleges, and housing projects). All 39 LEPs have produced an Evaluation Plan for their Growth Deals.		Interim report for over-arching programme evaluation to be published in 2019	More detailed evaluation report will be produced in 2022

Policy intervention and summary	Evaluation name/ impact evaluation score expected	Description of monitoring system	Benefit Cost Ratio (<i>if available or by when</i>)	Interim findings	Final findings
	<p>start by December 2015.</p> <p>Internal methodological work underway to explore the scope for impact evaluation of large transport schemes (DfT-led)</p>				

Sectoral Analysis Evaluations

Policy intervention and summary	Evaluation name/ impact evaluation score expected	Description of monitoring system	Benefit Cost Ratio (if available or by when)	Interim findings	Final findings
Aerospace Technology Institute A £2bn portfolio of collaborative and strategic Research and Development (R&D) projects, jointly funded by government and industry, to help the aerospace industry develop technologies for the next generation of aircraft.	Evaluation of the Aerospace Technology Institute Expected Impact Evaluation score 3: Modelled counterfactual predicting outcomes (without ATI) compared with actual outcomes with ATI	The evaluation scoping study that has just reported and will be published in early 2016 includes the design of an appropriate monitoring system for the programme to collect project level outputs and outcomes.	Ex-ante project appraisal BCRs projects with grant requests of £10m and more, since 2014/15 An ex-post assessment that adjusted applicants data for optimism bias and deadweight arrived at broadly similar estimates.	Scoping study with identified KPIs, established baseline and monitoring systems completed. Interim evaluation to be commissioned by early 2016 with results expected in 2017. Second interim evaluation results expected from 2019-20	Final impact evaluation (more comprehensive) is planned for 2022-23 Expect Interim evaluation and process evaluation between 2016-2018. Final impact evaluation expected in early 2020s
Agri-Tech Fund to support applied R&D in the sector, to be matched by industry. The strategy also aims to contribute to the government's environmental, sustainability and international development outcomes.	Agri-Tech Industrial Strategy Evaluation Expected Impact Evaluation score 3: Predicted vs actual (modelling)	Monitoring plans in place (led by Innovate UK - Catalyst, and individual centres once set up.)	Ex-ante programme business case estimated a BCR of £9 per £1 of government funding for this intervention. An ex-post assessment that adjusted applicants data for optimism bias and deadweight arrived at broadly similar estimates.	Evaluation scoping and baseline study completed. This also provides data on the agri-tech sector covering key economic metrics, which is not possible using existing ONS statistics.	Expect Interim evaluation and process evaluation between 2016-2018. Final impact evaluation expected in early 2020s

Small Business Research Initiative (SBRI) SBRI connects public sector challenges with innovative ideas from industry, via procurement contacts. It supports companies to generate economic growth and enables improvements in achieving government objectives.	SBRI Evaluation Expected Impact Evaluation score 5: Matched with before and after	For competitions run by Innovate UK, monitoring data on applicants and projects is collected via Innovate UK's back office systems. For competitions run by other public sector bodies, Innovate UK relies on those bodies sending through summary data.	Will be published in the Autumn of 2015.	Further work to complete the impact evaluation is currently being scoped and will be commissioned in 2016.	Full process evaluation and partial impact evaluation, capturing the value added to the economy through the participating businesses up to 2017, was completed in 2015 and is due to be published in early 2016. Previous evaluation published here , June 2010.
Knowledge Transfer Partnerships Helping businesses improve their competitiveness and productivity through the better use of knowledge, technology and skills that reside within the UK Knowledge Base.	Knowledge Transfer Partnerships Evaluation Expected Impact Evaluation score 4: Comparison with before and after	Monitoring data on applicants, projects and project outcomes is collected by Innovate UK, including (but not limited to) firm size, location, grant amount, and total project cost.	Combined with the 2010 evaluation, the total impact of KTPs is estimated to be between £7.5-8 for every £1 invested.	Capturing the impact as realised through the knowledge base and associates (2 of the 3 beneficiaries). Data will be collected at a single point in time but, where possible, matched to longitudinal data. Expect to have single-point-in-time data collection with a modelled predicted vs. actually.	The evaluation is complete and published here . Previous evaluations (impact score: 1) August 2012. Published here ; February 2010. Published here .

Policy intervention and summary	Evaluation name/ impact evaluation score expected	Description of monitoring system	Benefit Cost Ratio (if available or by when)	Interim findings	Final findings
Smart To help small and medium-sized businesses (SMEs) to research and develop technologically innovative products and processes.	Smart Evaluation Expected Impact Evaluation score 4: Comparison with before and after	Monitoring data on applicants and projects is collected by Innovate UK, including (but not limited to) firm size, location, grant amount, and total project cost.	The retrospective evaluation estimates the impact of Smart to be up to £4-5 in the medium term (up to 2017) for every 21 invested, potentially rising up to £9 in the longer term.	Retrospective Impact Evaluation by end of 2014 with a full matched-with-before-and-after impact evaluation running from 2014-December 2017. At least one control group.	A process and impact evaluation of Smart projects which have run since Innovate UK took over delivery of the programme in 2011 is complete and was published in late 2015 (link). Monitoring arrangements are in place to measure the longer term impact of Smart projects ending in December 2017.
Biomedical Catalyst (with Medical Research Council) Grant funding scheme- will provide responsive and effective support for the best life science opportunities arising in the UK.	Biomedical Catalyst Expected Impact Evaluation score 4: Methodology to be confirmed after initial scoping phase of evaluation. Regression discontinuity design is the favoured approach.			Further econometric analysis and the results of a datalinking exercise will follow in a later phase of the project during 2016 and 2017.	Evaluation framework and baseline assessment completed in 2015, and due to be published in early 2016. This includes a full process and early impact evaluation incorporating findings from stakeholder interviews, case studies and the applicant survey.

Innovation Platforms An innovation platform brings industry, academia and government together to focus on a specific challenge with a long-term commitment to a programme of support. The challenges are identified and a programme of activity is defined.	Innovation Platforms Expected Impact Evaluation score: TBC	Innovation Platforms utilise a number of Innovate UK initiatives in providing a programme of support. These programmes, such as Collaborative R&D, each have their own monitoring systems.		Commissioned in May 2015 this will develop a framework under which Innovation Platforms impact can be evaluated and to retrospectively apply this on two innovation platforms (Sustainable Agriculture and Food Innovation platform and Low Impact Buildings Innovation Platform). Draft evaluation frameworks have been completed.	Survey work is due to be completed by April 2016 with interim report due in July 2016. Further follow up studies are planned for 2017 and 2018.
Innovation Vouchers A grant of up to £5k to enable innovative SMEs to work with experts they have not worked with before to gain knowledge that could help growth.	Innovation Vouchers Expected Impact Evaluation score 5: Randomised Control Trial	Monitoring data on applicants and projects is collected by Innovate UK, including (but not limited to) firm size, location, grant amount, and total project cost.		Retrospective review of available programme information (Rounds 1-9), awaiting final draft. Randomised Control Trial (Rounds 11-14) in scoping phase	
Improving SMEs Commercial Success Matched grants funding –to support the UK	Improving SMEs Commercial Success Expected Impact Evaluation score 4:			Scoping phase. Expect to use a matched-before-and-after approach.

Green Investment Bank (GIB) Invests in green projects on commercial terms and mobilises private sector capital into the UK's green economy.	Evaluation of the Green Investment Bank (GIB) Outcome Evaluation Impact score 2: Before and After approach.	Monitoring system in place. Annual Investor Attitudes Survey conducted in 2013 and 2014, as part of the monitoring of the continued need for the GIB.	GIB cannot easily be evaluated due to the cross over between GIB and DECC policies that impact on investment	Annual survey for 2013 found that market failures persist in the products and sectors in which it is active. GIB's current mix of sectors and products therefore remains valid. Survey was repeated autumn 2014. An interim evaluation of the performance of the GIB has been undertaken. This includes a full review of GIB sectors and products. This will be published in early 2016.	GIB collects comprehensive data on its projects this includes data on the financial performance of the portfolio and green impact. This may enable evaluation of other performance dimensions in the future.
Post Office The Post Office operates a network of more than 11,500 branches across the UK and delivers a wide range of services including mail and parcels, financial services and services for Government (e.g.	Evaluation of Post Office Network Transformation Process Evaluation (2)	Monitoring data collected at a Post Office Ltd (POL) level and at a network level to track progress against KPIs.		ShEx requests data from POL which is received at weekly and monthly intervals to track programme progress and to identify potential emerging issues.	A review of programme outcomes will be conducted when the programme is complete in March 2018.

access to pensions and benefits, passport applications and driving licence applications) in addition to home phone and broadband.					

Annex B: Open and Transparent Evaluation: Annual Publication of Monitoring and Evaluation Coverage for BIS Regulation

B.1 BIS Regulatory Review Update

BIS is strongly committed to using robust evidence to support the development, implementation, monitoring and evaluation of our regulations. BIS and our partner bodies produce impact assessments assessing the costs and benefits of all regulatory changes that impact business prior to consultation, enactment and implementation.

Regulatory Reviews⁵ are a key element of better regulation and will provide an evidence based evaluation of the effectiveness of a measure after it has been implemented and operational (after an appropriate period of time). A Regulatory Review will review: the original policy objectives, the extent to which the measure is achieving its intended effects / meeting its objectives, whether there have been any unintended consequences, how well it is working, and the reasons why. It will also assess whether the objectives could be achieved with a system that imposes less regulation.

These regulatory reviews will then inform the decision-making process about the next steps for a measure, which are:

- a. **Renewal** - measure continues without change;
- b. **Amendment** - measure remains but changes are made to improve it;
- c. **Removal** - measure is removed without replacement; or
- d. **Replacement** - measure is replaced or redesigned substantially.

This Annex sets out the statutory reviews and non-statutory reviews with significant impact on business that will be published within the next 12 months⁶.

⁵ These are also referred to as post implementation reviews

⁶ Reviewing regulation: summary of BIS regulatory review commitments (Available at: https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/409550/bis-15-156-summary-BIS-regulatory-review-commitments.pdf) provides information on BIS statutory reviews and non-statutory reviews with significant impact on business as of February 2015

Statutory Reviews

The Small Business, Enterprise and Employment Act 2015 creates a new duty on Government Ministers to include a statutory review provision in new secondary legislation that has a regulatory effect on business, unless it is not appropriate to do so⁷. The statutory guidance⁸ explains what departments need to consider when deciding whether a review provision is appropriate. This is part of this Government's commitment to reduce both the stock of existing regulation and the flow of new regulation.

A review clause imposes a statutory duty to carry out a review of the relevant legislation, the date of publication of the statutory review is within five years from the date the legislation came into force, and subsequent reviews should take place at five year intervals, at least.

Non-Statutory Reviews

Non-statutory reviews are public commitments made to review the legislation usually within 3, 5 or 7 years. The review commitments are not in legislation but in other published documents, for instance as part of the original Impact Assessment (IA). This is normally accompanied by a section in the IA's evidence base providing more detail about the structure and content of the review. In most instances, non-statutory reviews will cover the same material as statutory reviews.

Proportionality

Consistent with the principle of proportionality, reviews are expected to be proportionate to the nature of the original legislation and the level and quality of evidence sought should be balanced against other priorities to ensure value for money for taxpayers.

The primary consideration for proportionality should be based on the legislation's expected impact on business and the wider economy. Secondary considerations include whether the impacts are contentious or uncertain, and the availability of established data sources.

For the majority of the BIS statutory review commitments, the impacts on businesses and the economy are limited, hence light touch reviews will be undertaken. For the non-statutory review commitments, more robust analysis (economic evaluation, impact evaluation and process evaluation) will be undertaken given the estimated impacts within the IAs.

⁷ Since 2011, government departments have regularly been including statutory review clauses on secondary legislation that impact business

⁸ BIS (2015) Small Business, Enterprise and Employment Act: statutory review requirements.

Available at: <https://www.gov.uk/government/publications/small-business-enterprise-and-employment-act-statutory-review-requirements>

Scrutiny of Post Implementation Reviews

The Regulatory Policy Committee (RPC) is an independent non-departmental public body whose purpose is to scrutinise PIRs and to give each PIR a Red, Amber or Green rating. These rankings are based on whether the analysis is fit for purpose, that is, whether it is proportionate and convincingly uses evidence to address the effectiveness of the legislation (i.e. the extent to which the legislation is working as expected; the extent to which its objectives and success indicators are met; and the extent of unintended effects).

B.2 BIS Regulatory Review Tables

International Affairs, Trade Policy and Export Control Reviews

Measure and Description	Review Commitment (statutory or non-statutory)	Net Present Value and Total Cost (£million)	Review Plan	Review Date
<p><u>The Export Control (Eritrea and Miscellaneous Amendments) Order 2011</u></p> <p>Implements enforcement of certain restrictive measures against Eritrea.</p>	Statutory	No impact assessment	Article 9 sets out the required review. A review using existing data sources such as the licensing data provided on SPIRE and if necessary consulting the Commission and individual Member States will take place at least 12 months prior to the review date.	13/06/16
<p><u>The Export Control (Belarus) and (Syria Amendment) Order 2011</u></p> <p>Implementing restrictive measures in relation to Belarus and Syria, which include prohibitions on trade, technical assistance and finance assistance.</p>	Statutory	No impact assessment	Article 9 sets out the required review. A review using existing data sources such as the licensing data provided on SPIRE and if necessary consulting the Commission and individual Member States will take place at least 12 months prior to the review date.	05/09/16
<p><u>The Export Control (Al-Qaida and Taliban Sanctions) Regulations 2011</u></p> <p>Implementing additional restrictive measures in</p>	Statutory	No impact assessment	Article 9 sets out the required review. A review using existing data sources such as the licensing data provided on SPIRE and if necessary consulting the Commission and individual Member States will take place at least 12 months prior to the review date.	30/11/16

Measure and Description	Review Commitment (statutory or non-statutory)	Net Present Value and Total Cost (£million)	Review Plan	Review Date
relation to Al-Qaida and Taliban, which include prohibitions on technical advice, assistance or training related to military activities.				

Consumer and Competition Policy Reviews

Measure and Description	Review Commitment (statutory or non-statutory)	Net Present Value and Total Cost (£million)	Review Plan	Review Date
<p><u>Postal Services Act 2011</u></p> <p>Making provision for: an unrestricted sale of shares in Royal Mail; transferring Royal Mail's historic pension deficit to Government; a new regulatory regime for the postal services sector; and a special administration regime.</p>	Statutory	<p>Net Present Value: 3,068</p> <p>Total cost (present value): 10,586</p>	Sections 34, 44, 67 and 88 set out the required reviews. There is on-going monitoring of the postal market by OFCOM (Sections 34 & 44). BIS will review part 3 (Regulation of the Postal Services) & 4 (Special Administration Regime) of the Act and will make use of the OFCOM review, other data sources on the postal market, and the views of stakeholders including postal users, OFCOM and postal providers	13/06/16
<p><u>The Enterprise Act 2002 (Merger Fees) (Amendment and Revocation) Order 2012</u></p> <p>Increasing existing merger fees and introducing an additional higher fee band for mergers involving acquisitions of enterprises with an annual UK turnover that exceeds £120 million to achieve greater cost recovery.</p>	Non-statutory	<p>Net Present Value: 0</p> <p>Total cost (present value): 23</p>	The review commitment is made in the <u>Merger Fees IA</u> . Team is conducting a light touch review of the 2012 Merger Fees reforms (increases) in terms of the objectives of the policy which were to increase the level of cost recovery, but without reducing the number of economically valuable mergers taking place, or reducing the number of mergers notified to the Competition and Markets Authority (CMA). They are currently establishing what data is held by the CMA and what other publicly available research is most salient for us to use.	01/07/16

European Reform Reviews

Measure and Description	Review Commitment (statutory or non-statutory)	Net Present Value and Total Cost (£million)	Review Plan	Review Date
<p><u>The Supply of Machinery (Safety) (Amendment) Regulations 2011</u></p> <p>Amending Directive introduces additional essential environmental protection requirements for new pesticide application equipment.</p>	Statutory	<p>Net Present Value: 3</p> <p>Total cost (present value): 0</p>	Regulation 7 sets out the required review. This amendment will be reviewed as part of the review of the parent regulation Supply of Machinery (Safety) Regulations 2008 which will be completed by the spring 2016. A review will be conducted, engaging with important stakeholders, relevant trade bodies, Health and Safety Executive (who enforce the regulation) and Machinery Notified Bodies to gather information and data regarding the impact of the regulation in terms of costs and benefits to business.	<p>Review date 01/12/14</p> <p>Publication due 31/3/16</p>
<p><u>The Toys (Safety) Regulations 2011</u></p> <p>Ensuring an improved level of safety, enforcement, clarification of scope and concepts; and a 'level playing field' between manufacturers in the EU.</p>	Statutory	<p>Net Present Value: -190</p> <p>Total cost (present value): 221</p>	Regulation 58 sets out the required review. The PIR will be based on a mix of qualitative and quantitative evidence, gathered from enforcement teams (in this case, Trading Standards) and industry participants, manufacturers (British Toy & Hobby Manufactures), importers (Equitoy), and retailers (Toy Retailers Association).	19/08/16
<p><u>Provision of Services Regulations 2009</u></p> <p>Directive enables the liberalisation of the EU services sector, requiring HMG to address the barriers</p>	Non-statutory	<p>Net Present Value: Significant</p> <p>Total cost (present value): 29</p>	BIS has commissioned an evaluation of the Services Directive and an evaluation of the impact of UK services liberalisation on the UK. The research will consider a number of UK service sub sectors where there is a history of liberalisation and where the sector is of interest to the UK economy, considering the impact of liberalisation on economic indicators such as trade, investment and GDP.	<p>31/07/15</p> <p>Work is on-going for this PIR</p>

Measure and Description	Review Commitment (statutory or non-statutory)	Net Present Value and Total Cost (£million)	Review Plan	Review Date
to service provision and improve the functioning of the single market for services.				

Labour Markets Reviews

Measure and Description	Review Commitment (statutory or non-statutory)	Net Present Value and Total Cost (£million)	Review Plan	Review Date
<p><u>The Employment Equality (Repeal of Retirement Age Provisions) Regulations 2011</u></p> <p>Phasing out the Default Retirement Age set at 65. Individuals are still able to retire at 65, but this is no longer mandatory.</p>	Non-statutory	<p>Net Present Value: 2,898</p> <p>Total cost (present value): 130</p>	<p>The review commitment is made in the <u>Phasing Out the Default Retirement IA</u>. The review will use a variety of survey and administrative data to assess whether this has been achieved, looking at trends in the nature and levels of participation in the labour market of this age group, and changing attitudes and practices of employers and employees in relation to this age group. Data sources are likely to include: Survey of Employers Policies Practices and Preferences Relating to Age; Fair Treatment at Work Survey; British Social Attitudes Survey; Labour force Survey; Work-life Balance Surveys of Employers and Employees. The review will also draw on administrative sources such as Employment Tribunal data to look at dismissal disputes, as well as qualitative evidence gathered with business stakeholders and trade unions to understand to how the change has had an impact.</p>	31/12/16

Business Environment Reviews

Measure and Description	Review Commitment (statutory or non-statutory)	Net Present Value and Total Cost (£million)	Review Plan	Review Date
<p><u>The Accounting Standards (Prescribed Bodies) (United States of America and Japan) Regulations 2012</u></p> <p>Permits companies who were listed on the stock exchanges in USA and Japan to continue to use the Generally Accepted Accounting Principles (GAAP) for the country they were listed in which they were listed financial years ending on or before 31/12/14.</p>	Non-statutory	<p>Net Present Value: 3.47</p> <p>Total cost (present value): 0</p>	A light touch PIR was conducted in early 2015, involving internal reviewing the assumptions and analysis of the original IA, and surveying and speaking to stakeholders in business, representative bodies and government. (Link)	Light touch PIR published March 2015 Regulations were remade in the summer of 2015. BIS is committed to a PIR by October 2020

Better Regulation Executive Reviews

Measure and Description	Review Commitment (statutory or non-statutory)	Net Present Value and Total Cost (£million)	Review Plan	Review Date
<p><u>The Primary Authority scheme (including extensions)</u></p> <p>Separated into four regulatory changes</p> <p>1) <u>Regulatory Enforcement and Sanctions Act 2008</u></p> <p>2) <u>Enterprise and Regulatory Reform Act 2013</u></p> <p>3) <u>The Co-ordination of Regulatory Enforcement (Enforcement Action) (Amendment) Order 2013</u></p> <p>4) <u>The Co-ordination of Regulatory Enforcement (Enforcement Action) (Amendment) Order 2014</u></p>	Non-statutory	<p>1) Net present value: 338 Total cost (present value): 219</p> <p>2) Net present value: 283 Total cost (present value): 99</p> <p>3) Net present value: 52 Total cost (present value): 53</p> <p>4) Net present value: 213 Total cost (present value): 150</p>	<p>The review commitments are made in the <u>Impact Assessment of Regulatory Enforcement and Sanctions Bill Parts 1 and 2; Extending the Primary Authority Scheme, Extending the Primary Authority to cover age restricted sale of gambling, the Housing Health and Safety Rating System, age restricted sales of sun bed tanning and Welsh regulations on single use carrier bag charging</u> <u>Extending the Primary Authority scheme to fire safety, improving the consistency and quality of advice to businesses</u>. The review has undertaken 2 new research projects to assess costs and benefits of Primary Authority both to businesses and local authorities.</p>	28/02/16

Advanced Manufacturing Services Reviews

Measure and Description	Review Commitment (statutory or non-statutory)	Net Present Value and Total Cost (£million)	Review Plan	Review Date
<u>The Scheme for Construction Contracts (England and Wales) Regulations 1998 (Amendment) (England) Regulations 2011</u> Minimising costs of adjudication and regulatory burdens to contractors and sub-contractors.	Non-statutory	Net Present Value: 259 Total cost (present value): 13	The review will include work with key industry representative bodies from across the supply chain (such as the UKCG and the NSCC) to establish the effectiveness of the amended legislation, including a “satisfaction” survey. This will be supported by an analysis of available data on payment days (e.g. from Experian), adjudications and the number of disputes under construction contracts coming before the Technology and Construction Court (e.g. from the HM Courts and Tribunals Service). If the data is unavailable, we will consider commissioning new research.	31/10/16
